SAN FRANCISCO, Oct. 16, 2013 /PRNewswire/ -- Listen Technologies Corporation today announced that McCune Audio Video and Lighting in San Francisco, Calif. purchased nearly three dozen Wireless Conferencing units from Listen Technologies as a rental option for its client base.

The wireless conferencing system is available for McCune Audio Video clients who need flexible, multi-use sound capabilities in meetings. It allows meeting participants to hear and interact in meetings without waiting for a "hand held" microphone to be passed to them or having them step up to a podium. The system is ideal for challenging locations such as historical buildings, corporate multi-purpose rooms, as well as hotel banquet halls and hospitality rooms.

"We have been looking for a wireless solution of this high quality, reliability and technical flexibility for several years," said Allan McCune President of McCune Audio Video and Lighting. "We added the new Listen Technologies wireless conferencing units to our rental inventory because of its ease of use and set up, strong coverage and excellent battery life. The high level of interaction as well as the ability to hear others makes this system extremely desirable for corporate events. Often when a group is larger, you see less interaction than you'd like. With the use of this new system, meetings can be productive without straining to hear or waiting to speak. Our clients are thrilled with the quality of sound as well as the labor and cost savings in the set up and removal."

The system is a complete personal sound system and provides up to 36 or more users with their own microphone and speaker positioned directly in front of each participant. This makes it possible for any meeting to become interactive and invites participation from all meeting attendees because every participant can listen and speak with total clarity to the entire room. Their voices are easily heard through the other units as well as the overall public address system if desired. The flexibility of the wireless system is a major strength, allowing easy set up and take-down with the option to adapt on the fly to any room's configuration. The 20-hour battery life and multi-frequency format ensures units will make it through the most demanding meetings and environments. Meeting participation can also easily be recorded for later reference for meeting attendees or for those who could not attend the meeting.
